

Cabinetry Clamp, Face Frames

BES8511

BESSEY® Quality

The cabinetry clamp is designed to combine the multiple steps of face frame cabinet installation into one easy process. It works on stiles up to 1 1/4" thick (each).

Face frame stiles can be tightened, aligned, pre-drilled and fastened while the clamp is in place. The clamp holds the individual cabinet edges together while also keeping the faces along the joint flush.

There is an integrated pilot-hole drilling guide on one end. This guide flips out of the way so you can drive screws to connect the cabinets without removing or repositioning the clamp.

Professional quality installation is achieved at a fraction of the time compared to the use of more conventional clamps.

1 Durable construction

Heavy duty steel clamp with steel sliding T-bars and aluminum alignment plate provides exceptional strength.

2 Integrated pilot hole

Simplifies drilling.

3 Non-marring felt pads

Included for clamp faces and alignment plate to protect and cushion points of contact.

4 Acme threaded screws

For quick and controlled tightening.
